Director's Message

I am pleased to present our report for the period of July 1st, 2023, to June 30th, 2024. I would like to extend my gratitude to Dr. Gabriela Novotna for covering the role of Director while I was on sabbatical until January 1st, 2024. Hannah Nguyen, our Research Administrator, has continued to skillfully support all our SWRC-related activities.

We are excited to share with you the incredible research and work that have occurred during this time. Our researchers actively engaged in research, publishing, and community outreach and partnered with the media to raise awareness about important issues. Our Centre has worked hard to share our Research Associate's fantastic work through lunch and learns and community engagement.

Our Research Associates have accomplished a great deal during this period; they secured funding for various research projects, including multiple Tri-Council, provincial, and internal grants and research contracts. They received funding for research on topics like working with newcomers, engaging Indigenous communities in cognitive remediation therapy, harm reduction, support for people aging with HIV, program evaluation, child trauma, veterinary social work practice and working with rural and remote communities. This was also our first year offering a Community Research Grant opportunity for our members, and three Research Associates received these grants. We're excited to see what the next year has in store for our Centre.

SWRC Community Grants

Launched in the Winter of 2024, the SWRC Community Grant initiative aimed to encourage internal researchers to explore their research ideas with community collaborators. Applications were peer-reviewed by external reviewers. Each successful project received \$10,000.

In its first round, SWRC received a total of three applications. All three projects received positive feedback from an independent reviewer. These projects will provide important insights and work with in collaboration with underserved populations and community organizations.

(PI)**

**Engaging Indigenous
communities in
cognitive remediation
group therapy**

Funder: Saskatchewan
Health Research
Foundation (SHRF)
Program: Align Grant
Other SWRC contributors: Dr.
Nuelle Novik
Duration: 2024-2025
Amount: \$10,000

Description: The purpose of this research is to engage Indigenous Elders and Knowledge Keepers in Saskatchewan regarding Cognitive Remediation Group Therapy (CRGT). CRGT is a psychosocial model of care for people living with HIV and cognitive health concerns that has been developed, tested, and adapted over a decade of community-based participatory research. The Principal Investigator (PI) and research team seek to partner with Saskatchewan-based Indigenous organizations to further adapt, test, and implement CRGT in community health settings. Aging with HIV has become a priority area of focus as the epidemic enters its fifth decade, due to new HIV diagnoses among older adults and increased life expectancy for people living with HIV. Cognitive impairment is a significant comorbidity for people aging with HIV, yet biomedical interventions to improve cognition have largely been unsuccessful. Psychosocial support is needed to reduce the impacts (e.g., stress, anxiety, and poor coping) associated with irreversible health conditions, yet we lack cognition-focused psychosocial therapies for people aging with HIV. Incorporating the Two-Eyed Seeing approach, this proposal aims to weave together Western and Indigenous knowledge systems to enhance the delivery of culturally sensitive CRGT for Indigenous Peoples living with HIV in Saskatchewan.

Newly Funded Projects

ONTARIO
HIV TREATMENT
NETWORK

**Dr. Andrew Eaton
(Co-PI)**

**Implementing a novel
geriatric-HIV clinic in
Toronto, Ontario**

Funder: The Ontario HIV
Treatment Network

Program: Breaking New
Ground

Duration: 2024-2026

Amount: \$150,000

Description: This project aims to pioneer tailored care models for seniors living with HIV, acknowledging and integrating diverse cultural aspects into their care. By addressing multifaceted challenges like health and social care access and stigma, it seeks to bridge gaps by tailoring culturally-sensitive Geriatric-HIV care models. By integrating geriatric and HIV care, the research strives for seamless patient management, to provide holistic support that accounts for medical and social needs and cultural preferences in healthcare delivery. Despite initiatives like Toronto's Geriatrics-HIV Partnership Clinic Pilot, challenges remain in understanding complex care needs, especially for underrepresented groups. To bridge these gaps, a collaborative co-design approach engages seniors, caregivers, and healthcare providers.

Aligned with patient-centered care trends, this project supports culturally appropriate care, addressing regional healthcare disparities. It aligns with provincial efforts to optimize care for complex health needs, potentially influencing healthcare policies and funding priorities. The research findings aim to shape geriatric-HIV care guidelines, policies, and future care practices.

Newly Funded Projects

**Dr. Andrew Eaton
(PI)**

Mapping needles, preventing disease: Establishing feasibility of pop-up HIV and syphilis prevention among people who use drugs in Regina, Saskatchewan

Funder: Saskatchewan Health Research Foundation (SHRF)
Program: Establishment Grant
Other SWRC contributors: Dr. Gabriela Novotna
Duration: 2024-2027
Amount: \$150,000

Description: The purpose of this research is to map community needle prevalence and respond with HIV and syphilis prevention interventions. This project will evaluate health outcomes (linkage to clinical care and knowledge of pre-and post-exposure prophylaxis (PrEP and PEP)) of these interventions, alongside the feasibility and acceptability of this rapid assessment and response strategy. A technology-driven, real-time, web-based community needle reporting application gathers data on community needle prevalence in public spaces in Regina, Saskatchewan. These map visualizations will be used to deploy and study the impact of pop-up HIV and syphilis point-of-care testing, HIV self-test distribution, and PrEP and PEP education in hotspot areas. This grant will assist with establishing Dr. Eaton's program of research to implement evidence-based and innovative approaches to HIV and STBBI prevention with the potential to significantly influence the well-being of people who use drugs.

Newly Funded Projects

**Dr. Andrew Eaton
(PI)**

**Travel Award to attend CIHR's
Institute of Infection and
Immunity New Investigator
Workshop in Spring 2024 in
King City, ON**

Description: The CIHR-III New Investigator Forum (NIF), hosted in King City, ON from April 2 – 4, 2024, is dedicated to supporting early-career researchers and late-stage post-doctoral associates pursuing academic careers in infection and immunity. This event, in collaboration with the CIHR HIV/AIDS and STBBI Research Initiative, offers professional development through sessions on grant writing, scientific communication, and career planning aligned with CIHR-III's mandate. The CIHR-III New Investigator Forum Travel Award provides essential travel support, ensuring participants can engage in networking and knowledge-sharing critical for advancing excellence in research.

Funder: Canadian Institutes of Health Research (CIHR)

Program: The New Investigator Forum

Duration: 2024

Amount: \$3,000

Newly Funded Projects

University
of Regina

**Dr. Andrew Eaton
(PI)**

**Scoping reviews of
civilian and co-response
crisis mental health
programs.**

Description: Public attitudes towards the value and scope of police services fluctuate based on contextual factors. Police services in Canada and the United States have been facing increasing scrutiny and criticism for their handling of crisis responses concerning mental health. Crisis mental health responses are emergency calls regarding fear of harm that a person poses to themselves or others due to episodic changes in behaviour commonly attributed to mental illness. Public pressure has resulted in efforts to reform those responses. These efforts require close partnership between people with lived experience of mental illness and crisis intervention, mental health professionals, community organizations, police, and policymakers. We are commencing two scoping reviews – one of co-response and one of civilian response - to synthesize alternative crisis mental health responses and build capacity to improve the response system in Canada.

Funder: University of Regina

Program: SSHRC Explore Grant

Other SWRC contributors: Dr. Kara Fletcher

Duration: 2023-2025

Amount: \$6,000

Newly Funded Projects

Description: An estimated 20% or more of the population has a family member with a substance use issue. While family members benefit from support, many affected family members and friends have trouble accessing treatment. In Saskatchewan, accessible family addiction supports can be particularly elusive for individuals living in rural and remote communities. Virtual support groups overcome certain service delivery barriers particular to rural and remote locations, such as the lack of personnel, the lack of transportation and other restrictions. The purpose of this project is to develop a province-wide virtual support group for individuals who are affected by their loved one's substance use, to provide an easily accessible intervention that is not currently offered. This project will evaluate the potential benefit of this virtual support group and survey the ongoing needs of this underserved population. Pilot data will be used to develop this project into a larger study with the goal of providing a sustainable, ongoing virtual support group for affected family and friends of substance misuse.

**Dr. Kara Fletcher
(PI)**

**Saskatchewan-wide virtual
support group for loved ones
affected by substance use and
misuse**

Funder: Centre for Research
on Children and Families
(CRCF)

Program: The RBC Fellowship

Duration: 2023-2024

Amount: \$3,000

Newly Funded Projects

University
of Regina

Description: Conspiracy theories refer to beliefs relating to secret plots orchestrated by groups who are considered to hold power and bad intentions (Mills, 2021). The current socio-political environment has created a context for conspirational narratives about COVID-19, vaccines, election fraud and other counterfactual information (Richards, 2022). A belief in conspiracy theories has increased in Canada since the start of the COVID-19 pandemic. The objective of this research is to better understand how disinformation and political polarization has impacted couple relationships since the beginning of the COVID-19 pandemic in 2020. Our exploratory study will meet this objective in two ways:

- 1) Through a scoping review of existing empirical and grey literature on the impact of conspiracy theories and disinformation on interpersonal relationships
- 2) Through interviews with 10-15 individuals who believe their romantic relationship has been impacted by conspiracy theories and disinformation since the onset of the COVID-19 pandemic.

**Dr. Kara Fletcher
(PI)**

Love in the age of rage: The impact of misinformation, conspiracy theories and political polarization on intimate relationships, a pilot study

Funder: University of Regina

Program: SSHRC Explore Grant

Duration: 2023-2024

Amount: \$5,954

Newly Funded Projects

**Dr. Lise Milne
(Co-PI)**

Bolstering the impact of the Child Trauma Research Centre: Collaborative, community-driven approaches to translating child and youth well-being research on trauma-integrated practices for service providers in Saskatchewan

Funder: Saskatchewan Health Research Foundation (SHRF)
Program: Jim Pattison Children's Hospital Foundation Solutions Impact Grant – Child and Youth Health
Duration: 2024-2026
Amount: \$150,000

Description: The University of Regina Child Trauma Research Centre (CTRC), established in 2020, addresses serious challenges facing Saskatchewan's children, families, and service providers, including high rates of child abuse, neglect, intimate partner violence, and poverty. Aligned with SHRF's goals, CTRC aims to enhance its impact by integrating trauma-informed practices with the needs of local service providers such as social workers, psychologists, and educators. This project will be guided by a diverse advisory committee and practice communities across five sectors (social, health, education, justice, and newcomer services). Using the Reach, Effectiveness, Adoption, Implementation, and Maintenance model, we seek to build a community of interest in child well-being and develop trauma-informed research to improve the lives of vulnerable children, youth, and families.

Newly Funded Projects

**Dr. Lise Milne
(Co-PI)**

**Win with Wellness Mental
Health Program Evaluation**

Description: The Presentation Series is an interactive presentation designed for grades five to nine students across Saskatchewan. Topics of the series include understanding mental wellness, tips for managing anxiety and stress, supportive and healthy relationships, and various support and tools available for youth in Saskatchewan. Dr. Milne and Dr. Reid have been hired by the Saskatchewan Roughrider Foundation to research and evaluate the effectiveness of the Win with Wellness Player Presentations in schools.

Funder: Saskatchewan
Roughrider Foundation

Program: Community
Program

Duration: 2023-2026

Amount: \$10,000

Newly Funded Projects

**Dr. Lise Milne
(Co-I)**

**The Child and Youth Trauma
Research Incubator (ThRIve) -
University of Regina Regional
Lab**

Funder: Canadian
Foundation for Innovation
Program: Innovation Fund
Duration: 2023-2028
Amount: \$524,106
(\$150,000 in investment
at the UoR)

Description: Stemming from a SSHRC Partnership Grant on Child and Youth trauma, a need was identified to develop dynamic spaces across Canada for community-led research to be accelerated, actioned, and assessed. Currently, deeper understanding of the impact of trauma on children and youth is restricted by the disconnection between academia, community knowledge, and lived experience. The Child and Youth Trauma Research Incubator (ThRIve) is a multi-pronged network of labs to create conducive environments for collaborative, community-based research to be nurtured and amplified at the institutional level. Seven regional labs (including University of Regina), one lead lab at McGill University and one virtual lab are being established.

Presentations by Kate Murzin (Realize), Dr. Francisco Ibáñez-Carrasco (University of Toronto), Marvelous Muchenje (University of Toronto), Dr. Rachel Landy (Dalhousie University), Dr. Andrew Eaton (University of Regina), and more!

The Canadian Association for HIV Research (CAHR), University of Regina, Realize and PANACHE have joined forces in an exciting partnership to deliver a cutting-edge workshop on living with HIV and cognition, aging, exercise, and health promoting services, programs and interventions. This workshop is designed to cater to the needs of people living with HIV, communities, service providers, and academics.
