**Subject:** Re: Chemistry & Biochemistry - 5 year response

Thank you for the CCAM time in the unit review process. We can re-examine options for CHEM100 delivery which does not have a lab for remote or hybrid delivery in future and some of our locations such as La Ronge already do video conferencing to improve access to students at other locations so I will continue to have some discussion with CCE about hybrid delivery in future. In regard to CHEM104 if there are special cohort needs for special consideration it is something that we are interested in hearing more about and examining potential future solutions particularly for remote sites that can still allow students to meet program requirements that they are trying to enter into. We do allow all students to register in CHEM100 which can do much to improve student confidence and success rates in those continuing in other chemistry classes. Renata
