

## **Math 26L Lab #2 Assignment**

### **Euler's Method**

Write a paragraph describing what Euler's method is, what it is used for, how it works and what kind of information results from using it. NOTE: when describing how Euler's method works DON'T just repeat the steps used to perform Euler's method - explain why it works. Your report should clearly and concisely answer these questions in 1 typed paragraph(ideally about  $\frac{1}{2}$  page long). If you turn in a report which is over 1 page in length, only the first page will be read! The brevity of this assignment is so each sentence can be carefully written, NOT an indication that it may be taken lightly, so be sure to keep your writing short, clear and to the point.
